

Energy Saver

Use your superpowers to save energy from energy-eaters!

Why do we need to unplug unused appliances?

Have you ever wondered why it's important to unplug unused appliances? Even if they are turned off, unused appliances may still consume energy. According to the **U.S. Department of Energy**, unplugging these devices could save the average household up to \$100 a year.

Unplug energy-hungry monsters:

- **Save Energy:** By turning off unused appliances, you can save energy.
- **Protect Our Environment:** Using less energy reduces our carbon footprint, leading to a healthier more sustainable planet for future generations.
- **Save Money:** Less energy use means lower bills for your family.

Talk to your parents about it, and together, we can save energy, money, and the planet! 🌍💚

You Have the Power!

The power of energy conservation is yours. Here are things you can do to help.

- 1 Ask your parents to look at the consumption portion of the energy bill. Your consumption is measured in Kilowatt-hours. Write the number down and see if following the changes below bring it down next month.
- 2 Go on a treasure hunt around the house with your parents. Look for appliances that are turned off but still plugged in, like phone chargers, game consoles, computers and printers.
- 3 Challenge your family to a game. Each day see how many appliances you can unplug together. Keep score and celebrate your wins.

YOU ARE A CONSERVATION SUPERHERO!
